

Ambient Water Ramps Up Marketing of Atmospheric Water Generators in Latin America

Company targets market opportunity in Latin American region as water scarcity issues and drought conditions loom large; multiple Ambient Water atmospheric water generators already on the ground or en route for installation

SPOKANE, WA – March 18, 2015 – Ambient Water (OTCQB: AWGI), a leading provider of atmospheric water generation systems for extracting water from humidity in the air, today reported that it is testing several of its products throughout Latin American regions, an area [reported to have looming water scarcity issues](#) despite being home to [31% of the world's fresh water](#).

“Latin American regions are not immune to the world’s water woes, even with almost a third of the world’s fresh water flowing through the area. There are concerns of overuse and pollution, leading to scarcity in some areas in the South American cone,” said Keith White, Founder and CEO of Ambient Water. “As such, many in these regions, from political officials to businesses, are searching for a rapid solution to help combat these water issues, and Ambient Water believes its atmospheric water generation technology is an ideal answer to provide the sustainable source of water needed.”

Ambient Water has engaged multiple Latin American organizations to discuss potential applications and in some cases has delivered machines for testing purposes. Some of these instances include:

- **Government office in Colombia:** Ambient Water has had discussions with officials from a government office in Colombia around the applications and installation of multiple [AW 400s](#), a commercial unit that can produce up to 400 gallons (1500 liters) of clean water per day.
- **Large Latin American Bank:** Ambient Water has placed [the Model 2500](#) on the executive floor of a large banking organization located in the capital city of Bogota, Columbia for use by the bank’s president and top echelon officials. The Model 2500 is a residential/office unit that can produce up to five gallons of clean drinking water per day.
- **Melgar Air Force Base:** Base officials are considering both the Model 2500 and AW 400 for the base’s potable water needs.
- **Municipality of Chocó:** [Several children have died](#) from unsanitary water in recent weeks. The Mayor of Chocó is considering deployment of multiple AW 400 units and Model 2500’s as an immediate solution to this water problem.
- **Other testing in Ecuador, Chile, Bolivia, and the Dominican Republic:** There are currently samples deployed to various organizations located in these countries for testing.

“We’re very excited about the conversations that we’ve had with these key organizations in Latin America, and that our sample systems are already producing clean water for use,” continued White. “Water is now a global problem that no one is immune from, but it also should not be crippling. Our atmospheric water generation technology is a solution for both residential and commercial applications, whether to provide drinking water for a home or for an entire

building. We look forward to our continued work within the Latin American market as key officials and businesses take proactive steps to secure their future water sources.”

Ambient Water’s patented atmospheric water generation technology literally makes water out of thin air, transforming humidity into an abundant source of clean water near the point of use. With multiple systems already commercially available or in development, the Company’s technology produces clean and fresh water for a host of commercial industries including process water for hydraulic fracking in the oil and gas industry and agriculture, while also providing fresh drinking water for homes, offices, and communities.

About Ambient Water Corp.

Ambient Water pioneered atmospheric water generation technology for extracting water from humidity in the air. Drawing from the renewable ocean of water vapor in the air that we breathe, the Company’s patented technology cost-effectively transforms humidity into an abundant source of clean water near the point of use. The scalable and modular systems can be configured for a number of water-sensitive applications ranging from oil and gas exploration to vertical farming. The systems can also be configured to produce high quality drinking water for homes, offices, and communities. For a thirsty planet on the verge of a water crisis, Ambient Water makes clean water out of thin air. To learn more about Ambient Water, visit our website at <http://www.AmbientWater.com>.
