

Ambient Water Announces Delivery and Installation of ‘Ambient Water 400’ at Houston, Texas Gas Facility

Company deploys commercial atmospheric water generation system for use at cryogenic storage and transportation facility for liquid gasses; eyes other applications within the oil and gas sector

SPOKANE, WA – January 6, 2015 – Ambient Water (OTCQB: AWGI), a leading provider of atmospheric water generation systems for extracting water from humidity in the air, today announced the delivery and imminent installation of its ‘Ambient Water 400’ atmospheric water generator at Applied Cryo Technologies’ Houston, Texas facility. The deal to deliver the technology was [originally announced](#) in October of 2014.

Once the installation is complete, Applied Cryo Technologies will be able to generate an abundant source of water on-site for everyday use. Ambient Water will monitor the amount of water generated under the atmospheric conditions present, as well as the power consumed by the ‘Ambient Water 400’, and present preliminary results at a later date. All results and data will be verified by an independent third party engineering firm, and will be used in the development of the [‘Ambient Water 20K’](#) system.

“The first commercial installation of our ‘Ambient Water 400’ is an exciting step for both our company and our technology, particularly as we continue our efforts within the oil and gas vertical,” said Keith White, Founder and CEO of Ambient Water. “We look forward to sharing some results of the technology in use to validate what we at Ambient Water already know – that atmospheric water generation is a needed technology to combat water scarcity issues worldwide.”

The installation of the ‘Ambient Water 400’ at Cryo Technologies is another step in Ambient Water’s immediate plan to supply the oil and gas industry with a clean, renewable water source. Ambient Water [identified the oil and gas industry](#) as a key industry vertical in need of this technology due to growing water scarcity issues both domestically and worldwide. The issue of water scarcity, particularly in regards to hydraulic well fracking, was recently discussed by Keith White in a piece for [Environmental Protection Online](#).

Ambient Water’s patented atmospheric water generation technology literally makes water out of thin air, transforming humidity into an abundant source of clean water near the point of use. With multiple systems already commercially available or in development, the Company’s technology produces clean and fresh water for a host of commercial industries including process water for hydraulic fracking in the oil and gas industry and agriculture, while also providing fresh drinking water for homes, offices, and communities.

A full list of features and specifications of the Ambient Water 400 can be found [here](#).

About Ambient Water, Corp. Ambient Water pioneered atmospheric water generation technology for extracting water from humidity in the air. Drawing from the renewable ocean of water vapor in the air that we breathe, the Company’s patented technology cost-effectively

transforms humidity into an abundant source of clean water near the point of use. The scalable and modular systems can be configured for a number of water-sensitive applications ranging from oil and gas exploration to vertical farming. The systems can also be configured to produce high quality drinking water for homes, offices, and communities. For a thirsty planet on the verge of a water crisis, Ambient Water makes clean water out of thin air. To learn more about Ambient Water, visit our website at <http://www.AmbientWater.com>.

Safe Harbor Statement

Matters discussed in this press release contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. When used in this press release, the words "anticipate," "believe," "estimate," "may," "intend," "expect" and similar expressions identify such forward-looking statements. Actual results, performance or achievements could differ materially from those contemplated, expressed or implied by the forward-looking statements contained herein. These forward-looking statements are based largely on the expectations of the Company and are subject to a number of risks and uncertainties. These risks include, but are not limited to, risks and uncertainties associated with: the impact of economic, competitive and other factors affecting the Company and its operations, markets, products, and prospects for sales, failure to commercialize our technology, failure of technology to perform as expected, failure to earn profit or revenue, higher costs than expected, persistent operating losses, ownership dilution, inability to repay debt, failure of acquired businesses to perform as expected, the impact on the national and local economies resulting from terrorist actions, and U.S. actions subsequently and other factors detailed in reports filed by the Company.
